

HOME WEEK Why use Wood, to build or remodel your home?

Why should you consider building with Wood? First of all wood is strong, durable, affordable and beautiful. Best of all, it's proven and preferred by most builders because of its ease of use and architectural flexibility. What about Termites? The truth is, termites do not attack properly installed and treated wood used in compliance with Hawaii's Building Code requirements. Wood framed homes are high quality, safe and solid. They are cooler, quieter with more comfort and increased value over time. The Hawaii Lumber Products Association (HLPAA) is a Hawaii based association dedicated to the promotion of lumber products as the preferred building material based on its proven durability and performance in Hawaii's climate conditions. For additional information on building with wood, visit their website at www.hawaiilumber.com.
