

# WOOD, Building Naturally.

It Just Makes Cents!

## Green

Borate-treated framing lumber has MUCH less impact on our environment than the “next best choice” of building material. Using 4 times less fossil fuel, 1.8 times less greenhouse gases and 2.5 Times less environmental impact overall.\*

## Sustainable

Wood is the most sustainable and only renewable building material available today. Treated Framing Lumber can provide a 20 year warranty for full replacement.

## Enduring

Hawaii’s wood homes have withstood the test of time with an over 100+yr track record of success.
